

Rubber process oil AT840

This oil belongs to paraffinic oils and has a clear dark brown color. This product is widely used in the production of rubber products with high elasticity. This oil, which is produced from special oil fractions, has an effective role in the distribution of raw materials inappropriately, and low viscosity is one of the important advantages of this oil. This oil with about 45% paraffinic carbon and 1% evaporation at 150 degrees Celsius is one of the most used oils in rubber industries.

Application

High elasticity rubber products such as tubes, carrier tapes, rubber covers
Rubber washers, rubber tires and household appliances and...

Product supply:

Barrel, bulk, flexi tank
